Centres for Mahanadi River Basin Management Studies (cMahanadi)

The Centers for Mahanadi River Basin Management Studies (cMahanadi) is a Brain Trust dedicated to River Science and River Basin Management. Established in 2024 by NIT Raipur and NIT Rourkela, under the supervision of cGanga at IIT Kanpur, the center serves as a knowledge wing of the National River Conservation Directorate (NRCD). cMahanadi is committed to restoring and conserving the Mahanadi River and its resources through the collation of information and knowledge, research and development, planning, monitoring, education, advocacy, and stakeholder engagement.

www.cmahanadi.org

Centre for Ganga River Basin Management and Studies (cGanga)

cGanga is a think tank formed under the aegis of NMCG, and one of its stated objectives is to make India a world leader in river and water science. The Centre is headquartered at IIT Kanpur and has representation from most leading science and technological institutes of the country. cGanga's mandate is to serve as think-tank in implementation and dynamic evolution of Ganga River Basin Management Plan (GRBMP) prepared by the Consortium of 7 IITs. In addition to this, it is also responsible for introducing new technologies, innovations, and solutions into India.

Preface

In an era of unprecedented environmental change, understanding our rivers and their ecosystems has never been more critical. This report aims to provide a comprehensive overview of our rivers, highlighting their importance, current health, and the challenges they face. As we explore the various facets of river systems, we aim to equip readers with the knowledge necessary to appreciate and protect these vital waterways.

Throughout the following pages, you will find an in-depth analysis of the principles and practices that support healthy river ecosystems. Our team of experts has meticulously compiled data, case studies, and testimonials to illustrate the significant impact of rivers on both natural environments and human communities. By sharing these insights, we hope to inspire and empower our readers to engage in river conservation efforts.

This report is not merely a collection of statistics and theories; it is a call to action. We urge all stakeholders to recognize the value of our rivers and to take proactive steps to ensure their preservation. Whether you are an environmental professional, a policy maker, or simply someone who cares about our planet, this guide is designed to support you in your efforts to protect our rivers.

We extend our heartfelt gratitude to the numerous contributors who have generously shared their stories and expertise. Their invaluable input has enriched this report, making it a beacon of knowledge and a practical resource for all who read it. It is our hope that this report will serve as a catalyst for positive environmental action, fostering a culture of stewardship that benefits both current and future generations.

As you delve into this overview of our rivers, we invite you to embrace the opportunities and challenges that lie ahead. Together, we can ensure that our rivers continue to thrive and sustain life for generations to come.

1. Preamble

River Atlas refers to a comprehensive document that compiles, analyses, and presents geospatial and hydrological information about an entire river basin in a standardized, map-based format. This volume is the first of its kind to provide a highly detailed and thorough mapping of the complex river system within the Mahanadi River Basin. The Mahanadi River basin, spanning around 141,589km² across several Indian states, notably Chhattisgarh and Odisha, serves as a lifeline for more than 40 million people. As a major east-flowing river system, the Mahanadi supports dense populations and critical economic sectors: irrigated agriculture, urban centers, fisheries, and large-scale industry (such as coal, power, and steel). Water resource issues in the basin are complex due to competing demands, periodic extreme events (floods and droughts), rapid population growth, and significant upstream-downstream dynamics. Effective management and decision-making regarding water resources within such a vast and complex basin require comprehensive and reliable data.

1.1. Significance of River Atlas Report

The River Atlas of the Mahanadi basin is a landmark document for several reasons:

- A. Comprehensive and Standardized Data:** It synthesizes critical spatial and hydrologic datasets—such as river network delineation, catchment boundaries, physiography, water infrastructure, flood zones, land use/land cover, and rainfall distribution—using consistent geo-referencing and up-to-date satellite/GIS technology.
- B. Decision Support for Planning and Management:** The Atlas serves as a baseline for developing and assessing irrigation, flood control, hydro-power, drinking water schemes, and inter-linking projects by providing accurate, basin-wide information.
- C. Disaster Mitigation and Climate Resilience:** Detailed mapping of floodplains, rainfall patterns, and drainage networks enhances forecasting and preparedness for extreme events, reducing human and economic losses.
- D. Transparency and Public Engagement:** By making this information accessible through various platforms, the Atlas allows civil society, researchers, and local communities to monitor changes and participate more meaningfully in water governance.
- E. Foundations for Integrated River Basin Management:** The Atlas supports ecosystem conservation, environmental flows assessment, and creates a shared knowledge base for policymakers tackling pollution, river health, and sustainable development.

1.2. Stakeholders Engagement

Effective management of the Mahanadi basin requires coordinated engagement from diverse stakeholders, each benefitting from and contributing to the River Atlas framework:

- A. **Central Agencies:** *Central Water Commission (CWC), Ministry of Jal Shakti*—responsible for basin-wide policy, inter-state mediation, and national/regional planning, using the Atlas for technical appraisals and funding decisions.
- B. **State Governments & Water Resource Departments:** Develop operational plans (e.g., flood management, irrigation scheduling), assess infrastructure needs, and collaborate using shared data for cross-border water issues.
- C. **Local Authorities & Panchayats:** Implement water conservation, disaster preparedness, and community-driven river restoration initiatives informed by the Atlas.
- D. **Industrial & Agricultural Users:** Plan sustainable extraction and return flows, optimize irrigation/drainage, and comply with pollution norms through data-backed water budgets and monitoring.
- E. **Environmental Agencies and NGOs:** Utilize Atlas data for ecosystem health assessments, environmental flow calculations, and restoration programs, while advocating for transparency and community participation.
- F. **Academic & Research Institutions:** Use the Atlas as the standard reference for hydrological, ecological, social, and economic research, including climate change impact modeling and catchment studies.

The participatory and multi-disciplinary approach promoted by the River Atlas report is crucial for reconciling competing demands and building consensus toward sustainable water management.

1.3. Scope of the Work

In the context of a **Condition Assessment and Management Plan (CAMP)** for a river basin, the **River Atlas report** plays a pivotal foundational role, serving as the primary spatial and data reference for both assessment and planning. Its major contributions are:

A. Baseline Mapping and Inventory

The River Atlas provides a comprehensive, standardized, and geospatially accurate mapping of the entire river network, including main stems, tributaries, sub-basins, drainage patterns, floodplains, wetlands, and water-related infrastructure (e.g., dams, barrages, monitoring stations). This baseline is essential for understanding river morphology, connectivity, and natural flow regimes, which are prerequisites for any condition assessment.

B. Data Integration for Condition Assessment

The Atlas integrates multiple datasets: topography, hydrology, land use/land cover, water quality, infrastructure, and ecological features. These aggregated layers enable managers to evaluate current river health, identify areas of degradation, prioritize stretches needing intervention, and benchmark baseline conditions—key steps in CAMP.

C. Decision-Support for Management Planning

For management planning, the River Atlas offers the crucial spatial context (where problems occur, proximity to sensitive zones, potential sources of impairment, etc.) necessary to design targeted interventions, set conservation priorities, and develop evidence-based management actions.

It enables tracking changes over time, facilitates predictive modeling (e.g., flood risk, flow alteration impacts), and supports scenario-based decision making.

D. Stakeholder Engagement and Transparency

By making authoritative river basin data accessible, the Atlas fosters transparency, supports stakeholder participation (from government agencies to local communities and NGOs), and helps resolve conflicts through shared, objective information.

E. Monitoring, Evaluation, and Adaptive Management

The mapped features and data layers in the Atlas provide reference points for monitoring changes in river condition over time, evaluating effectiveness of implemented management plans, and enabling adaptive management in line with the dynamic nature of river systems.

In sum, the River Atlas report acts as the backbone of a CAMP by supplying the essential geospatial intelligence, data integration, and decision-support framework required for holistic and science-based river basin assessment and management.

1.4. Data Sources

The River Atlas draws on a wide array of data types, sourced and validated through a combination of remote sensing, ground surveys, and inter-agency reporting. Below is a comprehensive table outlining essential data categories, specific parameters, their significance, and top sources:

Table 1: Type of Data and its Sources

Data Category	Parameters	Primary Sources	Use/Significance
River Network & Topography	River/tributary paths, sub-basins, contours, drainage patterns	CWC, Survey of India, NRSC/ISRO	Water availability, flood routing, morphoplogy
Hydrological Data	Streamflow, discharge, groundwater tables, drought/flood records	CWC, CGWB, State WRDs	Resource planning, drought/flood risk, allocations
Infrastructure Mapping	Dams, barrages, weirs, canals, lift schemes, monitoring stations	CWC, State WRDs, India-WRIS	Operations, safety, and water accounting
Land Use/Land Cover	Urban/rural area, cropland, forest cover, wetlands, mining	NRSC, FSI, State departments	Erosion, runoff, ecosystem health
Water Quality	Physico-chemical status (pH, turbidity, nutrients, BOD, pollution hotspots)	CPCB, SPCB, CWC, NGOs	Pollution monitoring, compliance, restoration
Demographic & Socio-economic	Population, livelihood, demand centers, land tenure	Census, State Stats, India-WRIS	Water demand, social impact, equity

2. Mahanadi River Basin

The Mahanadi River, one of the major river systems of peninsular India, originates from the Sihawa Hills in the Dhamtari district of Chhattisgarh at approximately 442 meters above sea level. It traverses a significant portion of central and eastern India before emptying into the Bay of Bengal. The river has a total length of about 851 kilometers and drains an expansive basin of over 141,600 square kilometers, encompassing parts of Chhattisgarh, Odisha, Jharkhand, and Maharashtra (6 & 7).

In its initial course, the river flows through Chhattisgarh, where it is joined by prominent tributaries such as the Seonath, Hasdeo, Mand, and Jonk. The Seonath River, the longest tributary, originates from the Maikal Hills and significantly contributes to the flow of the Mahanadi. The Hasdeo River, originating from the dense forests of the Chhattisgarh hills, also plays a crucial role in the hydrological dynamics of the basin. As the river progresses into Odisha, it receives additional tributaries, such as the IB, Ong, and Tel, further augmenting its volume. These tributaries, arising from the Eastern Ghats and surrounding highlands, contribute to the basin's geomorphic diversity and hydrological complexity.

Table 2: Details of Tributary/ Sub-basin of MRB

S. No.	Name of the Tributary/Sub- basin	Bank	Length (km)
1	Mahanadi		851
2	Pairi	Right	113
3	Seonath	Left	383
4	Jonk	Right	196
5	Hasdeo	Left	333
6	Mand	Left	242
7	Ib	Left	251
8	Ong	Right	204
9	Tel	Right	296

The basin encompasses various landscapes, ranging from rugged plateaus and forested regions in its upper reaches to expansive floodplains and deltas in its lower course. As the Mahanadi approaches the coastal plains of Odisha, it forms a sprawling delta before merging with the Bay of Bengal near Paradip. Fertile soils, intricate distributary networks, and significant socio-economic activities, including agriculture and aquaculture characterize this deltaic region.

1: Location Map of Mahanadi River Basin

2.1. Mahanadi Basin: Salient Features

Table 3: Salient Features of MRB

S. No.	Features	Description
1	Basin Extent	80° 28' to 86° 43' E 19° 8' to 23° 32' N
2	Area (Sq.km)	141589
3	States in the basin	Chhattisgarh (52.42%), Odisha (47.14%), Maharashtra (0.23%), Madhya Pradesh (0.11%), and Jharkhand (0.1%)
4	Districts	45
5	Parliamentary Constituencies (2009)	32
6	Mean Annual Rainfall (mm)	1291.92
7	Mean Maximum Temperature (° C)	39.56

4. River Network Preparation Methodology

The method adopted, in brief, to obtain the river network are stepwise as follows:

17: River Network Preparation Methodology

Note: This atlas presents only the named streams of the Mahanadi River Basin (MRB) in reference to the Survey of India Open Series Map, 1st edition (2010), at 1:50,000 scale toposheet and NWIC stream network data.

Disclaimer: The accuracies of the maps generated by the above method are subject to the limitations of the data processing tools and software used for the particular geographical regions as represented in Google Earth images, and are subject to future refinement.

5. River Codification System

In the present Atlas, alphanumeric characters are used for coding the river systems. A combination of natural and administrative boundaries is used to assign a code to each river and stream. Each sub-step in the codification system is assigned a digit or alphabet that indicates the length of the code up to that point, and the total length of the code is 16 digits.

River originates in Urban/Rural Area:

18: River Codification System for River originates in Urban/Rural Area

The first two digits denote the code for the major basin, based on the system proposed by the Central Water Commission (CWC), Government of India. Following this, the two alphabets indicate the state where the river originates, such as "CG" for Hasdeo. The following three digits represent the district where the river originates. The next character, 'U'/'R' or 'F' indicates whether the origin is in an urban/rural or forest area. For urban or rural origins, the subsequent six digits are the Urban Local Body (ULB) code if the river originates in an urban area or the village code if it originates in a rural area.

River originates in Forest Area:

19: River Codification System for River originates in Forest Area

While in forest areas, the subsequent four digits denote the sub-district code where the forest is located. The following two digits indicate the number of the specified forest in the sub-district.

- The district, sub-district, and forest codes correspond to the river's origin, with district and sub-district codes available from the Local Government Directory (LGD) website, GoI.
- The final digit indicates the number of the specific river that originates within the specific location falling within an administrative boundary such as town/city or a village.

6. Mahanadi Basin and it's River Network

Mahanadi River UID Code: 09CG377R44727301

Basin Area: 1,41,589 Sq. Km.

Major Rivers: Seonath, Tel, Ib, Hasdeo, Mand, Ong, Jonk, and Pairi

Number of Named Rivers - 1709

River Network- 34378.59 Km

Legend

- | | | |
|---|---|---|
|  Mahanadi River |  Basin Boundary | Elevation (m)

High : 1321
Low : 0 |
|  Major Tributaries |  Sub-Basin Boundary | |
|  Named Streams |  Indian State Boundary | |
|  Bay of Bengal | | |

20: River Stream in Mahanadi Basin

7. Major sub-basins of Mahanadi River Basin

❖ Major Main Stem Sub-Basins

- 1) *Upper Mahanadi Main Sub-Basin*
- 2) *Middle Mahanadi Main Sub-Basin*
- 3) *Lower Mahanadi Main Sub-Basin*

❖ Major Tributary Sub-Basins

- 4) *Seonath Sub-Basin*
- 5) *Tel Sub-Basin*
- 6) *Ib Sub-Basin*
- 7) *Hasdeo Sub-Basin*
- 8) *Mand Sub-Basin*
- 9) *Ong Sub-Basin*
- 10) *Jonk Sub-Basin*
- 11) *Pairi Sub-Basin*

21: Sub-basin Mahanadi River Basin

7.1 Upper Mahanadi Main Sub-Basin

Mahanadi River UID Code: 09CG377R44727301

Basin Area: 19311.48 Sq. Km.

Major Rivers: Kelo, Son, Lath, Borai, and Sukha

Number of Named Rivers: 205

River Network: 4302.72 Km

22: Upper Mahanadi Main River Basin and it's River Network

Upper Mahanadi Main Sub-Basin Mainstem Flow Diagram

23: Flow Diagram of Upper Mahanadi Main River Part

7.3 Lower Mahanadi Main Sub-Basin

[Directly draining from Naraj Barrage to sea (Including Chilika and Daya)]

Mahanadi River UID Code: 09CG377R44727301

Basin Area: 11542.08 Sq. Km.

Major Rivers (Distributaries): Gobari, Marka, Bhargabi, Hansua, Kushabhadra, Devi, Chitrotpala, Ratanchira, and Daya

Number of Named Rivers: 127

River Network: 2945.74 Km

8. Conclusions and Recommendations

8.1 Summary of Findings

- **Land use/ land cover analysis suggests that** agriculture is the most dominant land use in the basin, with significant coverage of 40.86% in the middle and lower reaches. Forests occupy a substantial portion of 28.77%, mainly concentrated in the upper basin regions of Chhattisgarh and Odisha. Rapid urbanization, particularly around Bhubaneswar and Raipur, contributes to increased impervious surfaces, affecting runoff patterns.
- **Significance of Report:**
 - This atlas provides a spatially comprehensive and scientifically validated reference for the CAMP Project, supporting decision-making on river conservation, water resources management, and sustainable land-use strategies.
 - It highlights critical ecological and socio-economic linkages across the basin, integrating physical geography, hydrology, land use, and human pressures into a holistic planning framework.
 - The findings serve as a baseline for adaptive management, enabling periodic monitoring, climate change assessments, and cross-state coordination across the five states of the basin.

8.2 Recommendations for Further Work

- **Periodic Updates**

Update the Atlas every 3–5 years with the latest satellite imagery, census data, and field surveys to capture changes in land use, hydrology, and socio-economic conditions.
- **Thematic Expansion**

Add new layers on biodiversity hotspots, soil health, and climate change vulnerability to make the Atlas a more comprehensive decision-support system.
- **Interactive Digital Platform**

Develop an interactive web GIS platform, allowing users to visualize, query, and download basin datasets in real time.
- **Multi-Scale Integration**

Develop sub-basin and district level atlases for finer-scale planning and micro-level interventions (e.g., watershed development, irrigation scheduling).

- **Community & Stakeholder Mapping**

Incorporate socio-cultural and livelihood dimensions (fisheries, forest dependence, agriculture practices) to reflect human–river interactions more fully.

- **Scenario Building**

Integrate tools to simulate future scenarios (e.g., urban growth, climate variability, dam operations) to support anticipatory planning.

- **Capacity Building through Atlas**

Use the Atlas as a training and awareness tool for government officials, students, and communities to strengthen basin literacy and participatory planning.

- **Atlas as a Living Document**

Institutionalize mechanisms (through CAMP Project or basin agencies) to ensure the Atlas evolves with new datasets, stakeholder inputs, and management priorities.

Acknowledgement

The Centre for Mahanadi River Basin Management and Studies (cMahanadi), NIT Raipur and NIT Rourkela expresses its sincere gratitude to the following agencies and institutions for their invaluable support and contributions in the preparation of the "Hydrological data" report for the Mahanadi Basin: We extend our thanks to the following agencies for providing data and support in the preparation of the report –

- Water Resources Department (WRD), Government of Chhattisgarh
- Central Water Commission (CWC), India
- Central Ground Water Board (CGWB), India
- Central Pollution Control Board (CPCB), India
- National Water Information Centre (NWIC), India
- Dept. of Urban Administration and Development, Govt. Of Chhattisgarh
- Dept. of Housing & Urban Development Govt. Of Odisha
- National Remote Sensing Centre (NRSC)
- Shuttle Radar Topography Mission (SRTM)
- Environmental Systems Research Institute (ESRI)
- India Water Resource Information System (WRIS)

A photograph of a river scene. In the background, there is a dense line of trees and bushes. A person wearing a blue headwrap and a grey shirt is standing in the shallow water of the river, holding a large net. The foreground shows a sandy, pebbly bank with some green reeds. The sky is clear and blue.
